Spring Boot

MySQL

Projects

Employee Management System

Technologies: Java, JDBC, MySQL

- Developed an Employee Management System using Java, JDBC, and MySQL
- Implemented CRUD operations to add, update, delete, and view employee records
- Used JDBC for database connectivity and interaction with MySQL
- Designed database tables to store employee information
- Followed clean coding practices and proper data handling

InternStatus – Internship Management System

- Developed a web-based application to simplify the internship process in colleges
- Connected students, faculty, companies, and administrators on a single platform
- Enabled students to create profiles and apply for internships
- Allowed faculty to track student progress and approve academic credits
- Provided companies with features to post internships and manage applications
- Implemented admin controls to verify postings and ensure authenticity
